

Experiment: Stone Age Science

You will join a crowd of scientists. Scientists have to identify scientific and science-related words or phrases, as spoken by a single Neolithic cave person. If you are the first to identify the science phrase correctly, you win the chance to be the cave person! Once you pass on your new scientific knowledge as the cave person, you will successfully complete this experiment.

This is an experiment (aka challenge) – with no line! Everyone plays at once!

One player per team is required. More are welcome to join in the fun. Knowledge of science people and concepts might help.

This experiment is always running.

You must be able to see the shared screen and chat, but **mute yourself as soon as you join**. You must join by computer. Once you know what's going on (you'll see instructions when you arrive), you can start playing immediately.

The experiment will last approximately 1-10 minutes, depending on player skill.

At the end of the experiment, the answer will be delivered to the cave person only via web site (don't shout it out or you'll be helping your opponents!). **You must submit this answer into the event website to complete the experiment and score points.**
